Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set

.aim 1; SEc 1D 1210; 44pp; English.

The present invention describes a method (MI) for screening for an unit neoplastic agent. The method invelves exposing cell or a change in explastic activity, determining a change in expression of at least one dem (i) of a signalure gene activity where (i) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL7010), or is at least 4% identical to (S) where a change in expression is indicative of actioned lastic activity. (I) has expositive expension is indicative and encoplastic activity. (I) has expositive activity and can be used to receive an anti-neoplastic agent, and can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a first of M, and the data is sufficient to convey the chemical structure and a second as colon, breast, stomach, lung, thyroid, oesophaueal ovarian. Ridney, prostate or paecreatic cunner adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous egil carcinoma, neutomodocrino vareinoma, papillary carcinoma and Wilm's tumour.

24-AUG-1993 (Lirst entry)

Retineblastoma gene.

PB gene product; p5688 portion; cell cycle progression control; confided box, therapeutic methods; arrest; tomorphyrachis; repulation, physical at processes; blood cell product gamete products ss.

Homo sapiens SR-40 cell line.

Loration/Qualitiers

```
retinoblasiona (RB) protein which may be used as part of a method of retirolling cell cycle progression which may be used in combination with therapeutic methods to arrest tumourjaenesis in combination cell cycle can be recersibly arrested in a convenient and safe manner. The protein is used in a compan, is relatively inexpensive and readily obtainable, and shows little or no toxic effects on healthy cells. It is also compatible with other methods and devices for requisiting perfects in processes of the brody such as blood cell prodo, and quante prodon. Bragments of the protein are soluble in low concus, of allycerol thus enhancing their value in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the sequence is that of the retinoblastoma gene which encodes the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mathod of controlling cell epole progression—uses purified retinoblastoma protein or tragment, for use in combination with therapeutic methods to arrest tumorigenesis

                                                                           protein RB (see AAM62465). A new claimed polypopride is a fusion of all a transcription tactor (FF) comprising a LNA binding demain, and (ii) a transcription tactor (FF) comprising a LNA binding demain.

Suppression domain. As a containing a nucleic acid encoding the fusion protein, and (2) expression vectors containing such bNA. The fusion protein, particularly expressed from gene therapy vectors (cspecially adenovitually experise), is used to treat hyperproliterative conditions, specifically cancer (particularly of the bladder) or restenosis (after analogisaty), but also diabetic

```

relinopathy, thyroid hyperplasia, Grave's disease, psoriasis, benian prostatic hypertrophy, Li-Fraumeni syndrome and peripheral cascular disease. Tissue specific expression of P2P-BH fissions is provided. The fusion proteins are more effective in repressing transcription of the P2P promoter than 8b alone and eager cell-cycle.

The invention relates to a method of detecting a ministed rotinoblastomatimes in the first mannals comprising hybridizing an isolated detecting wild-type RB (wirk) cPNA probe to a cell sample and detecting a mutated RB uncleis acid. The method is useful as a diagnostic trool for diagnosting retinoblastoma. RH culNA or genome INA are preferably used as probes to determine the defect region of the method contribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           length polymorphism analysis to determine the diseased allele, cloned RB cDNA can be used to generate specific anti-RB protein (anti-ppRBJ10)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer whether or not connected with rethnoblastoms. The method is also used in the suppression of tumouriquesis where the absent RB protein ppRBIIO will be provided through the molecular induction and que
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antibodics which are ascful for immonoscreening of tissue biopsy. The diagnostic method is particularly intended for use in sereening families with a history of hereditary retinoblastoma and for sereening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ransplanting of the RB cDNA to the individual in need of ppRB110.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           their children. It may also be used in prophylactic and postnatal screening and for the prediction of the development of promotary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer, such as, osteosarcoma, tibrosarcoma, qlioblastoma, breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       this sequence represents the Wild type human retinoblastoma gene.

The present invention describes a composition comprising a recombinant adenovirus expression vector, where the vector has an insert of exogenous DNA comprising a gene encoding a horizon protein and adenovirus BNA in which all of the roaling sequences of Ela, Elb, and protein IX, and part of Ela are deleted. The vectors are useful in gene theory treatment of cancer, especially for treating p53 deficient thmours. The vector enables safer and more efficient enumeurs. The present sequence encodes homen p110 KB retinolastoms tumour suppressor which can be used as the foreign gene in the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            201 AlabyssiysiuValLeuslaMersiuAspAspLeuVallieseritaeshhasaMertaen 220

lx bwa bequinded at nucleotides 457 or 460 and ending at 4020-4050, and having a gene encoding a foreign protein such as tumour suppressor for exercise the first state is used for screening tumour suppressor genes useful in gene therapy. The vector is particularly useful for freating or reducing hyperproliterative cell disorders such as thyroid hyperphasia, of answer, psorlasis, become as thyroid hyperphasia, of answer, psorlasis, become prostatic byperformer, encodes specifically hepdrocellular carrinoma, neoplasms, lowkaemids, lymphomas, etc. to highly thomore proliteration or to amelicate particular related pathology such as sixthe early analysis of any sactic for and lay-sacks disease. The vector is also useful for the safe recombinant production of diagnostic and therapeutic polypoptides and proteins.

Sequence 2995 BP; 975 A; 618 C; 593 G; 809 T; 0 other; 8999988888888**%**&

The present invention describes a recombinant adenovirus expression and a state conditions a partial or total deletion of a protein IX DNA and a state chouling a foreign protein. The recombinant admonstrate vector can have expostate activity and be used in gene therapy. The recombinant adenovirus expression vector is particularly useful for treating or small end profileration of a tumour, e.g. non-small cell lung cancer, small cell lung cancer, small cell lung cancer, small cell lung cancer, the action of a tumour, adopted a carcinoma, melanoma, retinoblastoma, breast tumour, adopted acrinoma, sarroma prostate tumour, bladder tumour, tumour of the reticuloridation as arroma tissues, whim's tumour, astrocytoma, gliopolastoma, neuroblastoma, ovarian catchinoma, ostwosarcoma or retail ancer: The present sequence encodes the retinoblastoma tumour suppressor protein pilo RB, which is
                                                                        Retinoblastoma; tumour suppressor protein, pl10-RB; cell cycle; p53; Pb; mitosin; cell death; adenovira! protein IX, quic theisp; sjusitati; adenovirus expression vector; tumour; non small cell luna cancer;
                                                                                                                             small cell lugg cancer, hepatocarchioma, hepatocellular carchioma:
melanoma; retinoblastoma; colorectal carchioma; sarcoma; Wilm's timour;
astrocytoma; glioblastoma; neuroblastoma; cvarian carchioma;
                                                                                                                                                                                                                                                                                                                          /product= "retinoblastoma tumour suppressor protein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant adequatral vector comprising a partial or total detailion of a profein IX DNA and a dene encoding a loreion profein, useful in gene therapy, particularly for treating or suppressing proliferation of a tumor -

collular proliferation, when coadministered with a p53 protein. The proteins can be used for inhibiting can be used for treation, when coadministered with a p53 protein. The RISPs can be used for treating diseases characterised by abnormal collidar proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              181 HeSerfhrGluiteAsnSerAlaLeuValLeuLysValSerfrpHethrPhetkeuLeu 200 [HIIIIIIIIIIIIIIIIIIIIIIIIIIIIII]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HHIIIIIIIIIIIIIIIIII HAATICIGCATIGGIGCIAAAAGITICITGGATCACALIIIIIAHA GUG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    607 GCHAAAGGGGAAGTATTACAAATGGAAGATGATGTGGTGATTTCATTTCAGTLAATGCTA 586

The vector also contains a cloning site persition of a promoter comprising a persitional downstream of a basal promoter comprising a persition. The TREVs can be used to produce stable cell lines in which game expression is tailuly regulated by tetracycline. They can be used for the production of proteins such as tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21 ProAlaProProProProProProGluGluAspProGluGlnAspSerGlyProGlu 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MetProProLysThrProArqLysThrAlaAlaThrAlaAlaAlaAlaAlaAlaAlaGluPro 20

Treat conditions related to (premature) againg, e.g. macular degeneration and arteriosclerosis. The cells can also be used to replace tumour cell lines in vitro and for studies of biochemical and physiological aspects of growth and differentiation. Long lived (immortal) cells could also be or use in the production of normal or genetically engineered artication of a telomerase activity and inhibition of one or both of a netinoblastoms (Rb)/INM4 pathway or a p53 pathway. Physphorylation of Rb by eyeller Eggenbut Pfances. ARI and eBMC releases the oills into the division cycle. Binding of TNK4 family members, e.g. the tumour suppressor planka, inhibits kinase activity and results in growth arrest pe handless can sale-tively and results in growth arrest pe handless can sale-tively and results in market and the service of the function and the p53 tumour suppressor and can also be used in the merhods. Other melecules which can be used in the defined to particular, a cdk4 mutant is one which differs that are more its about a cold market by a differs of the methods to the methods of the market by the and, and the based differs that are more its about a self-mutant is one which differs that are more in about any virus B7 protein, or other subsequently of use in pharmaceutical and cosmetic preparations used to And issues constructs of viral oncoprotein which bypasses Bh and/or p53. Antiseuse constructs of the Rb and plfinK4a genes may also be used. The methods are useful for increasing the proliferative capacity of cells, the cells are that echnology products.

designated Rb. Androgen receptor co-activator proteins from the present invention can be used in a regenied assays to identify candidate pharmaceutical molecules for the ability to promote on inhibit the interaction of androgen receptors and androgen responsive elements to modulate androgen estivity. The identification and characterisation of androgen receptors such as those of the invention will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lacilitate the development of screening assays to evaluate the potential

The present invention describes a method (M) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one quee (1) of a signature gene set, where (1) comprises a sequence (S) selected from R47 sequences (given in Anish 664 to AMEZOHO), or is at least 5% identical to (S). Where a change in expression is indicative of anti-neoplastic activity and can be used in gene therapy. M can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a structure and/or properties of the agent. M can be used to remain a structure and/or properties of the agent. M can be used to the static treatment of cancer such as colon, breast, stomach, lune, thyroid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oesophageal, ovarian, Kidney, prostate or pancrealic canrer, adenocarcinoma, carcinoma, clear cell cancer, infiltratina ductal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Young PE, Augustus M, Carter KC, Ebner R, Endress G, Horrigan S:

designated ppRB 110 or p110.88. The protein is used in a method for inhibit ing proliferation of pathologically proliferation genelis acking rendequency tunctronal retinoblastoma protein. The method comprises contacting the cells with a polypeptide camplising a 56 KD forminal transment of retinoblastoma protein. The method is useful to treating cancers, especially retinoblastoma or secondary ostrosarroma, breast cancer, small-cell lung cancer or fibrosarcoma.
                                                                                                                                                                                               The present sequence encodes a hyman retinoblastoma (PP) protein
                                                                                              Inhibition of career cell proliferation— with retinoblastoma protein or polypeptude
                                                                                                                                                            Example I; Fig 2A K; 72pp, English.

RESULT 1

AAV56442 standard, DNA, 3392 HP. 02-DEC-1998 (first entry) AAV58442; AAV58442

Modified retinoblastoma tumour suppressor gene.

Modified retinolastome tempor suppressor; RTSP protein; camper therapy; of did profileration inhibitor, ss.

Homo sapiens.

```
protein (RTSP) of the invention. The profeins can be used for inhibiting cellular proliferation, when coadministered with a p54 protein. The RISPs can be used for treating diseases characterised by abnormal collular proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified retinoblastoma tumour suppressor; RTSP profein; cancer therapy;

```
tetracycline responsive expression vector (TREV), which contains a sequence encoding a fusion protein comprising a transcriptional transactivation domain (TRE) operatively attached to a tetracycline repressor protein (TRE), the first sequence operatively positioned downstream of a promoter. The vector also contains a clouing site operatively positioned downstream of a basal promoter comprising a tetracycline operator. The TREVS can be asset to produce stable cell lines in which gene expression is tightly regulated by tetracycline. They can be used for the production of proteins such as tumon they can be used for the production of proteins such as tumon when the contains which we have contained to the production of proteins such as tumon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence appears in the specification, which describes a
